

NOAA Teacher at Sea

Lesson Plan

by

Andi Webb

NOAA Teacher at Sea 2014

*Oregon II*

Lesson Title: Fisheries Biologist, Fisheries Biologist...What Do You See?

Grade Levels: Kindergarten-1<sup>st</sup> grade

Most students are familiar with and love the book *Brown Bear, Brown Bear...What Do You See?* In an effort to teach students about the role of a fisheries biologist, this lesson will allow teachers to create a play on the original book.

Using large bulletin board paper, create a flow chart with the following:

Fisheries Biologist, Fisheries Biologist, What do you see?

I see a trawl coming toward me.

Trawl, trawl, what do you see?

I see a sea turtle crawling through me.

Sea turtle, sea turtle, what do you see?

I see many shrimp coming from the sea.

Shrimp, shrimp, what do you see?

I see a scale calculating me.

Scale, scale, what do you see?

I see fire sponge falling off me.

Fire sponge, fire sponge, what do you see?

I see a fisheries biologist researching me.

Fisheries biologist, fisheries biologist, what do you see?

I see NOAA's Teachers at Sea!

Show students pictures from NOAA's Fisheries Research Ships so they understand each aspect listed above.

Have students create their own posters of what a Fisheries Biologist can do. Please see the picture as an example.
